Alex Mercer

Senior Software Developer based in Bangalore with experience in distributed systems.

Over the last four years, I completed my B.Tech in Computer Science from National Institute of Technology graduating in 2024 with an 8.8 CGPA. My engineering background is deeply rooted in systems programming where I frequently leverage C++, Python, and Go for high-throughput network services. During my career, I designed and maintained distributed caching clusters using Redis and architected real-time messaging pipelines with Apache Kafka. I have contributed to open-source projects implementing Linux kernel networking utilities and multithreaded task schedulers.

Recently I won first place at HackBangalore 2023 for building an automated log anomaly detector. Currently seeking opportunities as a Backend Engineer or Distributed Systems Engineer.
